

Status Report

Team 11

Work done during last week

Achievements

- Sprint 3 planning is reevaluated as per advice from the review meeting.
- Few changes are made by the team and buffer time is allotted to these extra meetings.
- We have defined a user point is equal to 3 hour's effort.
- The user stories considered for sprint 3 are based on the sprint velocity given by the project management tool taiga.io, which is of 98 user points. User stories which are assigned to sprint 3 are equivalent of 98 user points.
- As per now the completed user stories are offers, social connectivity and privacy policy.
- The user stories which are in developing state are search, product quantity and subscription.
- The tracking of work progress is done basically by burndown chart and also along with the logbook, where each member in the team logs the working time .
- The burndown chart consists of X-axis and Y-axis. The X-axis consists number of working days and Y-axis consists of Remaining effort (hours). It also provides the number of user stories completed in the sprint 3.

Issues

- Few Scrum meetings are rescheduled due to unavailability.
- Due to holidays, expected outcomes are not achieved.
- We finished the sprint-3 only up to 38%, and there is a chance of using buffer time for further task accomplishment.

Note: Everyone in the team has participated and equally contributed towards the project. No one is working remotely away from BTH.
