

Status Report

Team 11

Work done during last week

- Conducted sprint review meeting.
- Our sprint-2 is completed and it is shown to the customers (i.e. team acts as customers) and feedback is collected.
- In sprint-2, we completed store page, product page, login and signup page features.
- The collected feedback is analyzing today and plan for sprint-3 will be started based on the feedback result.
- As in our previous status report we provided a burndown chart which is lack of explanation regarding user story points as we considered it in days. So a detailed plan will be taken for sprint 3.

Quantitative Assessment

- As sprint 2 is already completed and a burndown chart is provided in previous status report, so in this report there is no need to track progress as at present feedback obtained is analyzing.
- Sprint 3 will start from December 22nd, so the tracking process will start once sprint starts.
- The following link provides the contribution of each member for sprint 1 and 2. [Click Here](#)

Issues

- Issues regarding tracking of progress occurred as there is no clear connection between user story points and estimated effort.
- We are advised to connect the user story points with hours, so it will be easy to track the progress.
- So user story points are converted to hours, as in our project each user story point equals to 3 hours.
- This will be implemented from sprint 3 as sprint 2 is completed as said above.

Every member participated in the project activities and no member is participating remotely.
