# Status Report

Team 11

Work done during last week

- The analysis phase for sprint-2 completed, data gathered regarding the product, stores, login details, and feedback option.
- The design phase for sprint-2 completed, were the database and user interfaces are designed.
- The user interfaces consist of products, login design, and feedback option design.
- At present database modelling is under development.
- Quantitative assessment of project is provided in following burndown chart using project management tool taiga.io.

Figure 1. Sprint 2 burndown chart

The above chart shows the progress in which the analysis and design phases are completed and development is going on, which makes 50% of the sprint is completed.

Issues

- Issue arise during the design of database module which prolonged the work to next day along with the design of user interface module. It leads in the delay of development process.
- In order to mitigate this issue, we have allocated our buffer time in development phase.
- Minor team issues are resolved by Scrum master.

Participation

All team members participated in the daily activities of project during this week.
